

Our mission is to make sure you can focus on yours.

Statement of Capabilities

fractional CISO

Startups and mid-sized organizations face the same Security threats, regulatory and client requirements as larger entities, but often lack the funding to hire a full-time Chief Information Security Officer. This is where we come in big for our clients - offering a Fractional CISO service. This is essentially a retainer that ensures you have a dedicated CISO for an agreed upon number of hours per month. It also ensures you have access to k2 partner firms, and the flexibility to quickly expand the hours in urgent situations.

Compliance *readiness*

Today nearly every organization is affected by some form of Security or Privacy regulation, due to industry specific or government regulations. We can help you navigate through the complexities of these regulations, how to apply them to your organization, identify the pertinent controls and then assess whether you are compliant. With experience on both sides of a Compliance Program, auditing as well as maintaining, we come with a unique perspective to guide you through what gaps are material and how to efficiently address them.

We manage your Cybersecurity & Compliance risk so you can get on with business.

"We can't thank you enough for your assistance over these past 4 months. You are a true professional. You came into a completely new environment, quickly and ably sized up the landscape, challenges and opportunities, and advanced our mission".

-General Counsel, 2B Law Firm

Managed Detection & Response
